social high risk

3-CGP conceptual content

health inequalities ; Differences in health status or in the distribution of health determinants between different population groups. Some are attributable to biological variations or free choice, and others to the external environment and social conditions outside the control of individuals. In the latter case, they may be unnecessary and avoidable as well as unjust and unfair, and cause or reflect health inequity (Dicepid)

Poverty Areas City, urban, rural, or suburban areas which are characterized by severe economic deprivation and by accompanying physical and social decay.(MeSH)

HIGH RISK PATIENT a patient at considerable risk for a special health problem e.g. cardiovascular disease or cancer. The risk can be caused by genetic and/or life-style factors e.g. exercise, drinking and/or smoking.(Woncadic)

Social Marginalization ; Individuals or groups, excluded from participation in the economic, social, and political activities of membership in a community.(MeSH)

High-risk group ; A group of people in the community with a higher-than-expected risk for developing a particular disease, which may be defined on a measurable parameter—eg, an inherited genetic defect, physical attribute, lifestyle, habit, socioeconomic and/or educational feature, as well as environment (McGraw-Hill Concise Dictionary of Modern Medicine. © 2002 ) (MeSH)

Vulnerable Populations ; Groups of persons whose range of options is severely limited, who are frequently subjected to COERCION in their DECISION MAKING, or who may be compromised in their ability to give INFORMED CONSENT.(MeSH)

POPULATION AT RISK; characteristic of an individual or a population who because of their genetic, social, economic, cultural, or psychological circumstances or genetic background are vulnerable to a particular injury or disease. (Woncadic)
